THE FUTURE IS ROBOTS

~~might be~~ ~~might see~~ might succeed

In the future, robots ¹ might be good for us or bad for us, but we can be sure about one thing – we're going to see a lot more of them. The Henn-na hotel in Japan is known as the world's first robot hotel. They hope robots will do 90% of the work. The robots, which look like humans, already greet people, answer questions, and help guests with their bags. If the hotel does well, and there are signs that it ² might see, then this is the kind of thing that we ³ might succeed in other kinds of business soon, too.

~~might learn~~ ~~might not be~~ might start

We used to think that robots could only do simple jobs like cooking or cleaning, but there are signs that this ⁴ might not be true. Now some scientists are saying that robots ⁵ might learn how to do more difficult jobs and ⁶ might start doing the kind of work that doctors, teachers, and other professionals do at the moment.

~~might begin~~ might have ~~might lose~~

If businesses start using robots, a lot of people ⁷ might lose their jobs, but it's also true that people ⁸ might begin to do new and more interesting jobs – making robots, for example. If robots do a lot of the boring work, people ⁹ might have more free time to enjoy themselves and get away from the computer screen.

2 PRONUNCIATION diphthongs
